**SEARCH NOTES
(INCLUDING SEARCH STRATEGY)**

	DATE	EXMR
Updated search of US Patents, history in file	3/18/2005	ALH

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

2. The second step is to define the requirements. This involves determining what the system is intended to do and what it must be able to handle.

3. The third step is to design the system. This includes creating a detailed plan of how the system will be built and how it will be tested.

4. The fourth step is to implement the system. This involves building the system according to the design and testing it to ensure it meets the requirements.

5. The fifth step is to maintain the system. This involves monitoring the system's performance and making any necessary adjustments or updates.

6. The sixth step is to document the system. This involves creating a record of the system's design, implementation, and maintenance.

7. The seventh step is to evaluate the system. This involves assessing the system's performance and determining if it meets the requirements.

8. The eighth step is to improve the system. This involves identifying areas for improvement and making changes to the system.

9. The ninth step is to deploy the system. This involves putting the system into operation and making it available to users.

10. The tenth step is to monitor the system. This involves tracking the system's performance and making any necessary adjustments.

11. The eleventh step is to support the system. This involves providing assistance to users and resolving any issues that arise.

12. The twelfth step is to update the system. This involves making changes to the system to keep it current and secure.

13. The thirteenth step is to retire the system. This involves decommissioning the system and removing it from service.

14. The fourteenth step is to archive the system. This involves saving a copy of the system's data and documentation for future reference.

15. The fifteenth step is to restore the system. This involves recovering the system's data and documentation from the archive.

16. The sixteenth step is to backup the system. This involves creating a copy of the system's data and documentation.

17. The seventeenth step is to restore the system. This involves recovering the system's data and documentation from the backup.

18. The eighteenth step is to update the system. This involves making changes to the system to keep it current and secure.

19. The nineteenth step is to monitor the system. This involves tracking the system's performance and making any necessary adjustments.

20. The twentieth step is to support the system. This involves providing assistance to users and resolving any issues that arise.

21. The twenty-first step is to deploy the system. This involves putting the system into operation and making it available to users.

22. The twenty-second step is to evaluate the system. This involves assessing the system's performance and determining if it meets the requirements.

23. The twenty-third step is to improve the system. This involves identifying areas for improvement and making changes to the system.

24. The twenty-fourth step is to maintain the system. This involves monitoring the system's performance and making any necessary adjustments or updates.

25. The twenty-fifth step is to implement the system. This involves building the system according to the design and testing it to ensure it meets the requirements.

26. The twenty-sixth step is to design the system. This includes creating a detailed plan of how the system will be built and how it will be tested.

27. The twenty-seventh step is to define the requirements. This involves determining what the system is intended to do and what it must be able to handle.

28. The twenty-eighth step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

29. The twenty-ninth step is to archive the system. This involves saving a copy of the system's data and documentation for future reference.

30. The thirtieth step is to restore the system. This involves recovering the system's data and documentation from the archive.

31. The thirty-first step is to update the system. This involves making changes to the system to keep it current and secure.

32. The thirty-second step is to monitor the system. This involves tracking the system's performance and making any necessary adjustments.

33. The thirty-third step is to support the system. This involves providing assistance to users and resolving any issues that arise.

34. The thirty-fourth step is to deploy the system. This involves putting the system into operation and making it available to users.

35. The thirty-fifth step is to evaluate the system. This involves assessing the system's performance and determining if it meets the requirements.

36. The thirty-sixth step is to improve the system. This involves identifying areas for improvement and making changes to the system.

37. The thirty-seventh step is to maintain the system. This involves monitoring the system's performance and making any necessary adjustments or updates.

38. The thirty-eighth step is to implement the system. This involves building the system according to the design and testing it to ensure it meets the requirements.

39. The thirty-ninth step is to design the system. This includes creating a detailed plan of how the system will be built and how it will be tested.

40. The fortieth step is to define the requirements. This involves determining what the system is intended to do and what it must be able to handle.

41. The forty-first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

42. The forty-second step is to archive the system. This involves saving a copy of the system's data and documentation for future reference.

43. The forty-third step is to restore the system. This involves recovering the system's data and documentation from the archive.

44. The forty-fourth step is to update the system. This involves making changes to the system to keep it current and secure.

45. The forty-fifth step is to monitor the system. This involves tracking the system's performance and making any necessary adjustments.

46. The forty-sixth step is to support the system. This involves providing assistance to users and resolving any issues that arise.

47. The forty-seventh step is to deploy the system. This involves putting the system into operation and making it available to users.

48. The forty-eighth step is to evaluate the system. This involves assessing the system's performance and determining if it meets the requirements.

49. The forty-ninth step is to improve the system. This involves identifying areas for improvement and making changes to the system.

50. The fiftieth step is to maintain the system. This involves monitoring the system's performance and making any necessary adjustments or updates.
